

## **Preset Installation Guide**

1. Unzip the .zip file after it's downloaded. Once the files are unpacked, they should be in .lrtemplate form. Skip this step if you only downloaded one preset!
2. Make sure you have Lightroom open.
3. Double-click the preset you want to install and you should be prompted by Lightroom to install the preset. Click 'Install'. Do this one preset at a time.
4. If the prompt doesn't appear, you may need to choose an application for opening the preset. Make sure you select Lightroom.
5. Once the presets are installed correctly, you should see them under the 'User Presets' section within the Develop Module in Lightroom.
